Preface

This 2012 update edition of the Bongo International Studbook begins with a detailed report by Juliette Shears on the year’s activity by the Bongo Surveillance Project in Kenya. Included are news of work in the Eburu, Aberdares, Mau and Mt. Kenya forests; according to Juliette, the Aberdares bongo group is growing, Mt. Kenya shows surviving bongo despite poaching mainly for elephants, significant levels of poaching in the Mau have led to the BSP’s most concentrated efforts this year, resulting in a safer environment for all wildlife, and in the Eburu a small group are still in evidence. The BSP teams can always use financial support; please donate!

Information on the captive population follows, with analysis in the form of reports on the annual census since the onset of bongo in captivity, plus age and reproductive parameters, and 2012 regional and global statistics.

Section 3 includes the customary SPARKS data lists, preceded by an explanation of conventions and terms used. The first list shows events (births, deaths and transfers) occurring during 2012 for all known animals within the international captive population of Eastern / Mountain bongo (Tragelaphus eurycerus isaaci), in order of studbook number and birth date (as closely as possible).

The second list groups all animals living during 2012 shown at their most recent locations, organized by continent as shown in the Table of Contents. All bongo holders are kindly requested to find your facility in the second list and to check carefully for any errors or omissions in the data. Please also make note of the international (or ‘global’) studbook number for your young calves, and enter these numbers in your own records. Thanks as always for your cooperation in providing regular data updates.

I encourage all to make use of the location glossary (arranged alphabetically by mnemonic) which provides contact names and details for every location holding bongo worldwide.

I also humbly suggest that conservation measures for bongo are always in need of additional funding; website links provided will enable your participation in this effort. ~ Lydia Frazier Bosley, August 2, 2013

Thanks are given to The Oregon Zoo, Director Kimberly A. Smith, and Deputy Director Chris Pfefferkorn for their willingness to sponsor the Bongo International Studbook. The support and cooperation of all bongo holders in providing regular and timely data are also greatly appreciated; the studbook continues to exist only because of this effort. I appreciate greatly the article contributed by Juliette Shears.

As always I am grateful for the help of Laurie B. Lackey, ISIS, for SPARKS and computer help. My husband Chris has helped by tolerating my absence from his side while completing the studbook.

BONGO SURVEILLANCE PROJECT Update

The Bongo Surveillance Project continues to track and protect wild bongo groups in Kenya. Following is an update from April 2013, written by Juliette Shears, describing their latest activities.

This link will enable you to see live footage of wild bongo from a camera trap set in the Aberdares.

The photo below is an example of a still shot, this one was taken on Mt. Kenya.

Please consider supporting this valiant effort to save the few Mountain Bongo remaining in the wild. Here is a link to the BSP website home page with an easy “donate now” link:

Objective of BSP Project

The BSP (Bongo Surveillance Project) objective is to secure a future for the last remaining Mountain Bongo in the wild (Tragelaphus eurycerus isaaci) which are critically endangered (IUCN RED LIST). The bongo antelope is on the edge of extinction, and inferential figures suggest there could be less than 100 remaining. The Bongo Surveillance Project (BSP) has not only highlighted the plight of the critically endangered Bongo, but the serious destruction of the forest and the potential implications to the local community, and Kenyan nation. The Bongo as a forest dependant species is a flagship species for Kenya’s remaining high forest eco systems. Efforts towards conservation of bongo will in turn benefit the Kenyan forests.

Thank you for your support to the Bongo Surveillance Project Without your help the monitoring of these last remaining Bongos in the wild would not have been possible.

REPORT MAY 2012 – MARCH 2013

During this last year there have been some remarkable achievements through the actions of the BSP despite the increase in the levels of poaching, in Kenya. The BSP team of 15 members undertake surveillance in Eburu, Aberdares, Mau and Mt Kenya high forests. Most of the trackers are local to these areas, their knowledge is a vital requirement for bongo tracking and monitoring, together with an understanding of the forest communities.

We have in the field up to 11 camera traps, depending on conditions. The teams use GPS to record coordinates of bongo observations, including illegal activity. These are collated into maps for reporting. They help form the baseline for future surveillance activity.

ABERDARES – See below photographs taken during March of the Honi, Aberdares bongo. The group are most definitely growing! This is such positive news. This photograph shows 6-8 bongo and a rare mid-afternoon picture.
**S. Aberdares** Surveillance has been operative in the South around the S.Mathioya and Maragu Rivers. Bongo indicators have been observed by the BSP team, probably some 6 animals, but nowhere where they have been residing in any one area. This area is extremely mountainous with difficult terrain to cover. This team is in need of updated GPS to effectively do further surveillance in this area.

**Kanjwiri- Aberdares**, has been a challenging area, recently due to the presence of illegal timber extraction groups. This bongo group has moved into higher forests, the BSP will continue to monitor. Just before this intervention we were able to collect one of our finest bongo photographs.

**MT KENYA** - Mt Kenya has been an area also targeted by poachers, particularly for elephant. After almost a 12 months period, we have with increased surveillance secured further evidence bongo are still surviving in this area.

**MAU**
**SW Mau** - The forest where BSP has been carrying out the most intensive surveillance during 2012, has had very significant levels of poaching. Many hundreds of snares have been collected together with elephant spear traps. We are glad to say, this hard work has set a more positive foundation for a safer environment for all wildlife, including bongo. Finlays Tea Estates located on the edge of SW Mau forest have noted the forest elephants can be heard and are close-by (within 6km) which is a good sign. There is also a notable increase in camera trap results of other wildlife. We had not anticipated the levels of poaching when we set up the team here, to monitor bongo 12 months ago. There has been a very notable decrease in snaring activities, only 20 snares have been found over the period November 2012 to January 2013. As the bamboo area, is too far to operate from Finlays BSP base camp, we are proposing to locate a second BSP team, operating out from the Ndoinet area (where 3 samples were collected in 2010). In Ndoinet there has been much intrusion with cattle and dogs in the forest.
We have recorded bongo spoor periodically within the range of 15km of Finlays Tea estates, Kericho which is encouraging. Even more exciting, after returning in January 2013 to the Transmara forest where original samples were collected in 2007, a salt lick amidst the dense forests is indicating bongo spoor and the potential of a new group of bongo. The team lead by Peter Mwangi has returned to this area in late March, to place and monitor a camera trap. We await further news.

**Eburu Forest** – we have just received this photograph from the camera trap monitored by Soloman our BSP tracker in this area. This small group of bongo are still in evidence. There has been a significant reduction in poaching and timber extraction in this forest over 2 years.

**COMMUNITY AND SCHOOL BSP CONSERVATION OUTREACH**

**Bongo Wildlife Clubs - 2012/2013.**

The Bongo Wildlife Clubs have been formed in schools, close to the last remaining groups of bongo – Eburu, Mt Kenya, SW Mau, Aberdares forests. These were started in 2006. Each year up to 40 pupils, per school, age 11 years have the opportunity to experience the BSP educational outreach programme. There are now 18 schools. We are informed by the club patrons the selection of the 40 pupils at each school, annually gets harder, as the demand is so high. Outreach into the communities is estimated at 14,000. It is good to see progression with previous Bongo Wildlife Club members, now starting up Conservation Youth groups.

**William Holden Educational Centre – Mt Kenya**

There has been much activity, from tree nurseries to visits to the William Holden Educational centre near Mt Kenya. Refer to one of the Mau school pupil's feedback below. During the last 12-15months we have taken over 400 pupils and teachers from the Bongo Wildlife Clubs to the centre, from all over Kenya. The pupils have the opportunity to learn more about alternative energy, such as solar and biogas. First hand, they have the chance to see the repatriated bongo group located at William Holden and to share experiences and best practice in conservation.

*William Holden Educational Visit* “Thanks to BSP and their sponsors for introducing the BSP conservation program to our school and for giving us the opportunity to interact with other nominated BSP schools so we may learn from each other. I have learnt a lot of things that will even help me in my school work, especially in social study. After school, I will take a career in wildlife and environment. For now, I will continue to spread the gospel of conservation of bongo and plant more trees to help ease pressure in the forest. BSP have shown us the way. It is upon us to act now to save our Heritage”  

Tuyoibei Primary School, SW Mau Pupil- Mercy Chembai
“Bongo Hotspots” – Giant Painting exercise.
For many of the pupils it has been the first time to actually use watercolours and paint brushes. As art is no longer part of the primary curriculum, the school pupils really excelled themselves, displaying great creativity and producing giant posters showing all key area “bongo hotspots” in Kenya. The painting can be used as a “communication tool” to the communities to explain the work of the BSP and where the critically endangered mountain bongos are currently surviving.

- Description of Data Fields & Conventions

- Events during 2012 ordered by birthdate / studbook no.

- Living Population’s Current Locations by continent
Systematics of Data Collection

The studbook data are the results of a joint cooperative effort among all holders of bongo in captivity and the studbook keeper. Once a year, the studbook keeper sends out a request for updates for each location’s bongo population. Whatever information is reported for the preceding years is entered in the studbook’s database via the SPARKS (Small Population Animal Record Keeping System) program, and frequently there is additional correspondence to clear up questions or discrepancies. For the few locations which do not respond to inquiries, animals not reported by any source for the preceding two years will likely be designated ‘lost to followup’ and their listings will only appear in the historical edition of the studbook every three years (e.g. 2009); they will not appear in “currently living” accounts.

Description of Data Fields and Conventions:

The Studbook uses SPARKS (Single Population Analysis & Records Keeping System), and the data fields as used in the historical and the living animals ‘by location’ listings are as follows:

Studbook number – The unique numerical identifier assigned to each animal following the year of its birth, more or less in chronological order dependent upon date of birth.

Sex – M=male, F=female, ?=unknown, contracepted males and females also indicated

Birth date – self-explanatory; for wild-caught animals lacking records, an estimate of ~ one year at time of capture was frequently used

Sire – Studbook number of male parent; UNK = unknown; Dam – studbook number of female parent

Location – location of each event represented by a nine-character (or less) mnemonic representing that location; names are frequently shortened versions of location’s city name, or institution names (e.g. JACKSONVL, or DISNEY AK for Disney Animal Kingdom) or private owner’s names (e.g. SCHUSTER). Full address and contacts, including website when available, for each mnemonic/location follows in alphabetic “location glossary”

Date – actual or estimated date of the event on that line of data (e.g. birth, capture, etc.); tilde ~ indicates estimate to nearest month or year, or within a range (e.g. 2 yr. period)

Local ID – accession number used at each institution (one animal will usually have a different accession number at each location)

Event – which type of activity occurred on this date line, e.g. birth, death, transfer

Tag/band – number/color/ and possibly which ear, of identifying ear tag
Notch – number represented by ear notches in one or both ears
Name – “house name” given to animal at birth or upon arrival at a new location (sometimes changed, an animal may have one or several names, or none)
Breeder no. – Initials indicating birth location followed by number indicating animal’s place in chronologically consecutive list of births at that location (ESC 101 indicates one-hundred-first bongo born at San Diego Wild Animal Park, Escondido, California, USA)
Transponder # – unique numerical identifier in a device inserted under the skin, readable by scanner device, usually placed within a day or two of a calf’s birth
Events During 2012, arranged by Studbook Number (and birth date as closely as possible)
The first bongo listed below, Gwen, studbook # 543, is the oldest living bongo in captivity currently.

In the update editions of this studbook, only living animals are shown; in the historical editions every, usually every third year, the entire list of all known bongo ever held in captivity are shown, beginning with studbook #1.
